## WHAT IS CLAIMED IS:

## **CLAIMS**

- A method of notification for a system, comprising the steps of:
   configuring usage rate profile data in a database;
   monitoring a parameter of the system;
   comparing said parameter with said usage rate profile data; and
   generating an alert condition if said parameter deviates from said usage rate
   profile data.
- 2. The method of Claim 1 wherein said usage rate profile data comprises consumption rates for system consumable materials.
- 3. The method of Claim 1 wherein said usage rate profile data comprises wear rate data for system components.
- 4. The method of Claim 1 wherein said monitoring step comprises repetitively reading said parameter to determine an actual rate of usage.
- 5. The method of Claim 1 wherein said parameter is a consumable material level indicator.
- 6. The method of Claim 1 wherein said parameter is a component wear indicator.

- 7. The method of Claim 1 wherein said rate profile data is organized by users.
- 8. The method of Claim 1 wherein said rate profile data is organized by accounts.
- 9. The method of Claim 1 wherein said usage rate profile data comprises budget expenditure rate data.
- 10. The method of Claim 9 wherein said budget rate expenditure data is organized by budget users.
- 11. The method of Claim 9 wherein said budget expenditure data is organized by budget account.
- 12. The method of Claim 1 wherein said usage rate profile data is organized by time.
- 13. The method of Claim 1 wherein said usage rate profile data is organized by time of day.
- 14. The method of Claim 1 wherein said usage profile data is organized by day.
- 15. The method of Claim 1 wherein said usage profile data is organized by calendar events.
- 16. The method of Claim 1 wherein said configuring step further comprises the steps of:

5

periodically performing said monitoring step;

determining a trend of parameter values over time; and
saving said trend of data values in said usage rate profile data.

- 17. The method of Claim 16 wherein said parameter is compared with said trend of data values.
  - 18. The method of Claim 16 further comprising the steps of:

receiving reserve level data of a system resource corresponding to said parameter and

calculating a depletion factor with respect to said trend of parameters values and said reserve level data.

- 19. The method of Claim 18 wherein said generating step further comprises the step of outputting said depletion factor.
- 20. The method of Claim 18 further comprising the step of allocating said system resource according to a usage priority factor.
- 21. The method of Claim 20 wherein said usage priority factor is based on user identity.
- 22. The method of Claim 20 wherein said usage priority factor is based on account identity.
- 23. A method of Claim 16 wherein said alert condition includes an indication of said depletion factor.

- 24 The method of Claim 23 further comprising the step of automatically ordering replenishments for said system resource in response to said alert condition.
- 25. The method of Claim 1 wherein said alert condition includes an alert indicator.
- 26. The method of Claim 1 wherein said generating step further comprises the step of communicating said alert condition via telecommunications.
- 27. The method of Claim 1 wherein said generating step further comprises the step of disabling the system.
- 28. An apparatus for providing notification for a system, comprising: means for configuring usage rate profile data in a database; means for monitoring a parameter of the system; means for comparing said parameter with said usage rate profile data; and means for generating an alert condition if said parameter deviates from said usage rate profile data.
- 29. The apparatus of Claim 28 wherein said usage rate profile data comprises consumption rates for system consumable materials.
- 30. The apparatus of Claim 28 wherein said usage rate profile data comprises wear rate data for system components.
- 31. The apparatus of Claim 28 wherein said parameter is a consumable material level indicator.

5

- 32 The apparatus of Claim 28 wherein said parameter is a component wear indicator.
- 33. The apparatus of Claim 28 wherein said usage rate profile data comprises budget expenditure rate data.
- 34. The apparatus of Claim 28 wherein said usage rate profile data is organized by time.
- 35. The apparatus of Claim 28 wherein said means for configuring further comprises:

means for periodically monitoring said parameter;
means for determining a trend of parameter values over time; and
means for saving said trend of data values in said usage rate profile data.

- 36. The apparatus of Claim 35 wherein said parameter is compared with said trend of data values.
  - 37. The apparatus of Claim 35 further comprising:

means for receiving reserve level data of a system resource corresponding to said parameter and

means for calculating a depletion factor with respect to said trend of parameters values and said reserve level data.

38. The apparatus of Claim 37 further comprising a means for allocating said system resource according to a usage priority factor.

- 39 The apparatus of Claim 37 further comprising a means for automatically ordering replenishments for said system resource in response to said alert condition.
- 40. The apparatus of Claim 28 further comprising a means for disabling the system.
